

Verification & Validation Expertise Centre

for Models, Simulations and Serious Games

by Dr. ir. Manfred Roza

Who Am I?

What evil things I do to you!

V&V
Death Star

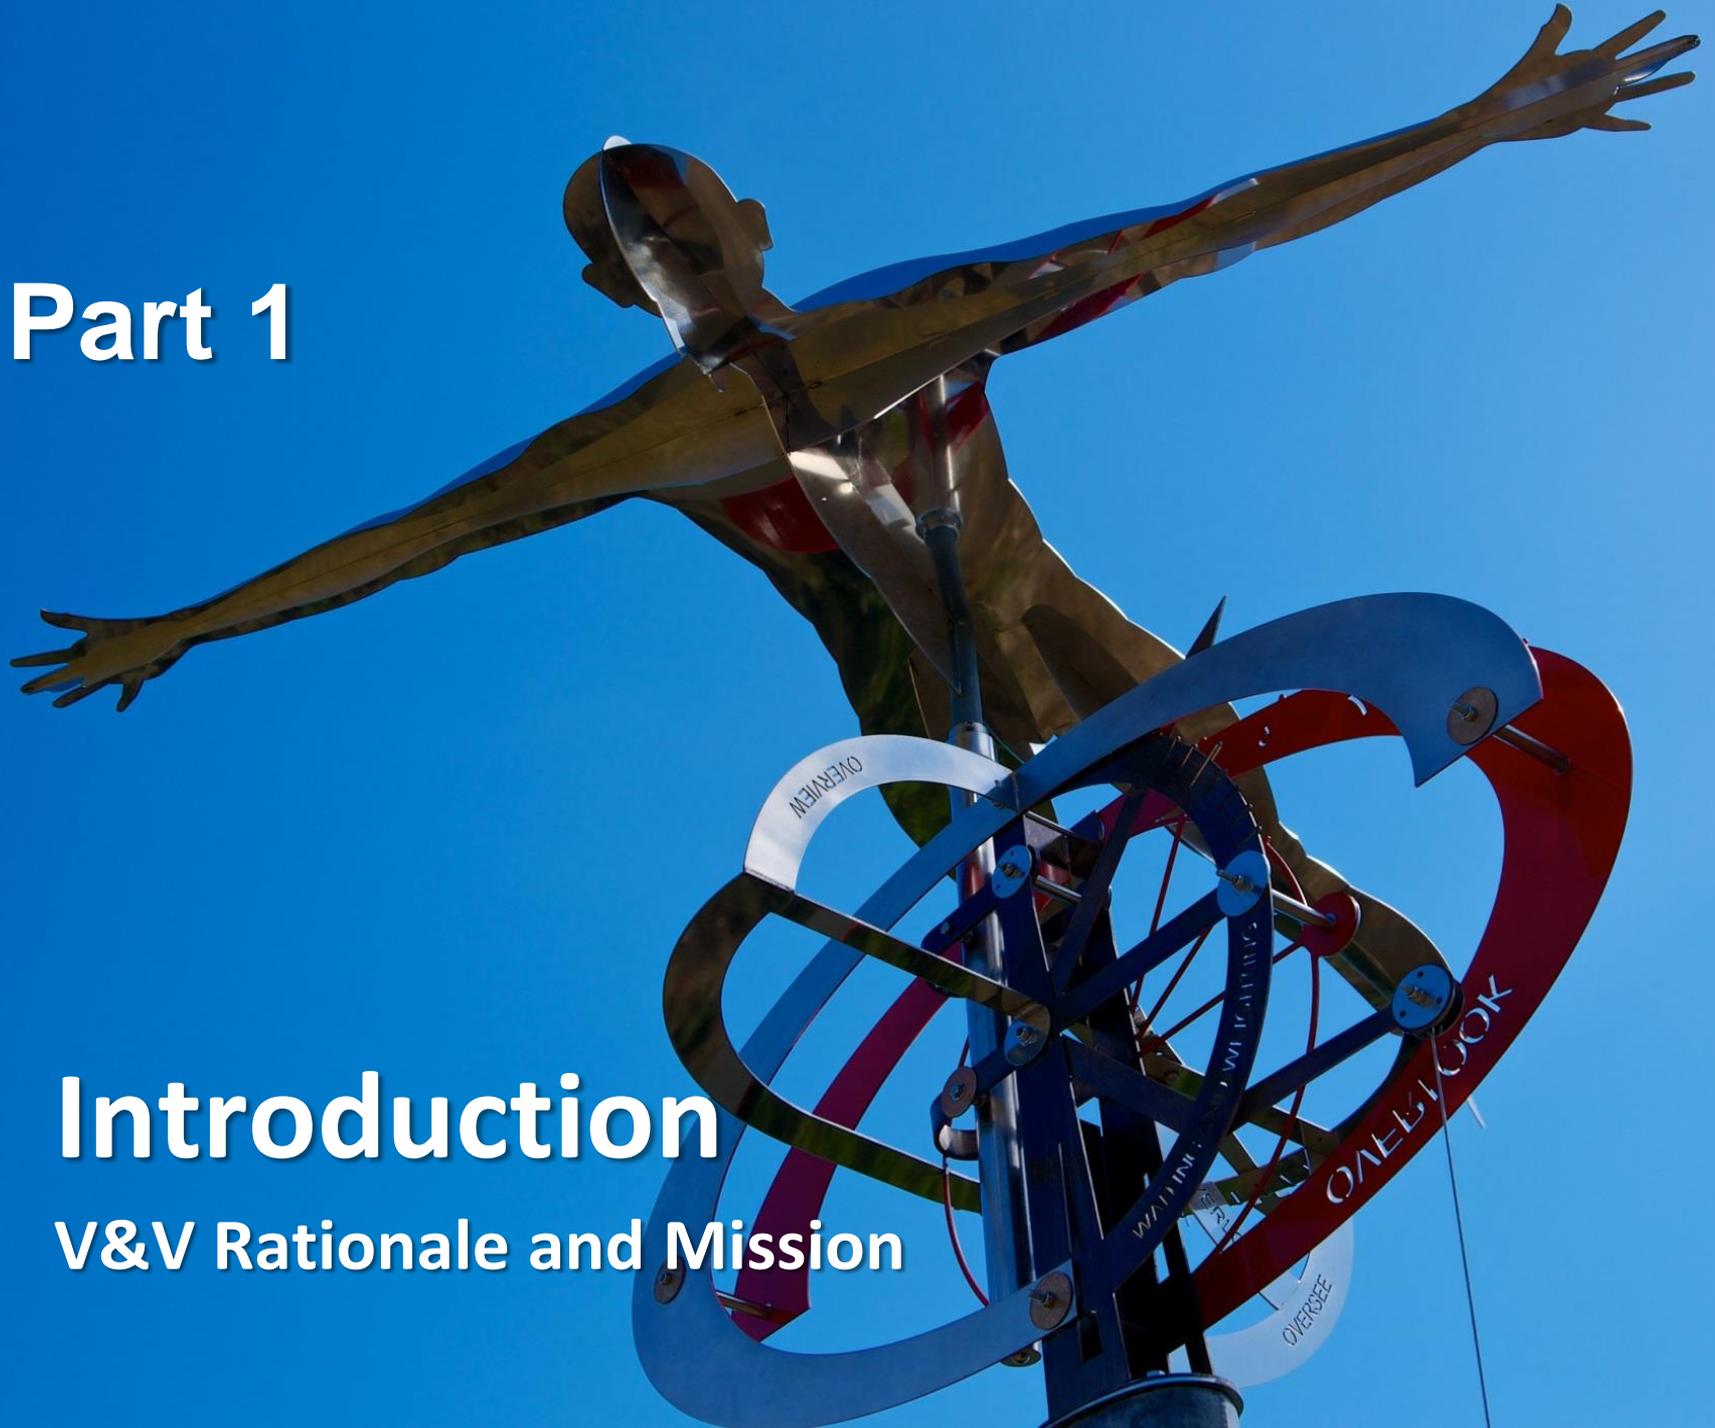

*"You can't escape your destiny,
You must face Darth V&V again!"*

M&S Alliance

Part 1

Introduction

V&V Rationale and Mission

No worries its realistic,
I can tell ooh really? Great!

Ceci n'est pas une pipe.

Δ δ

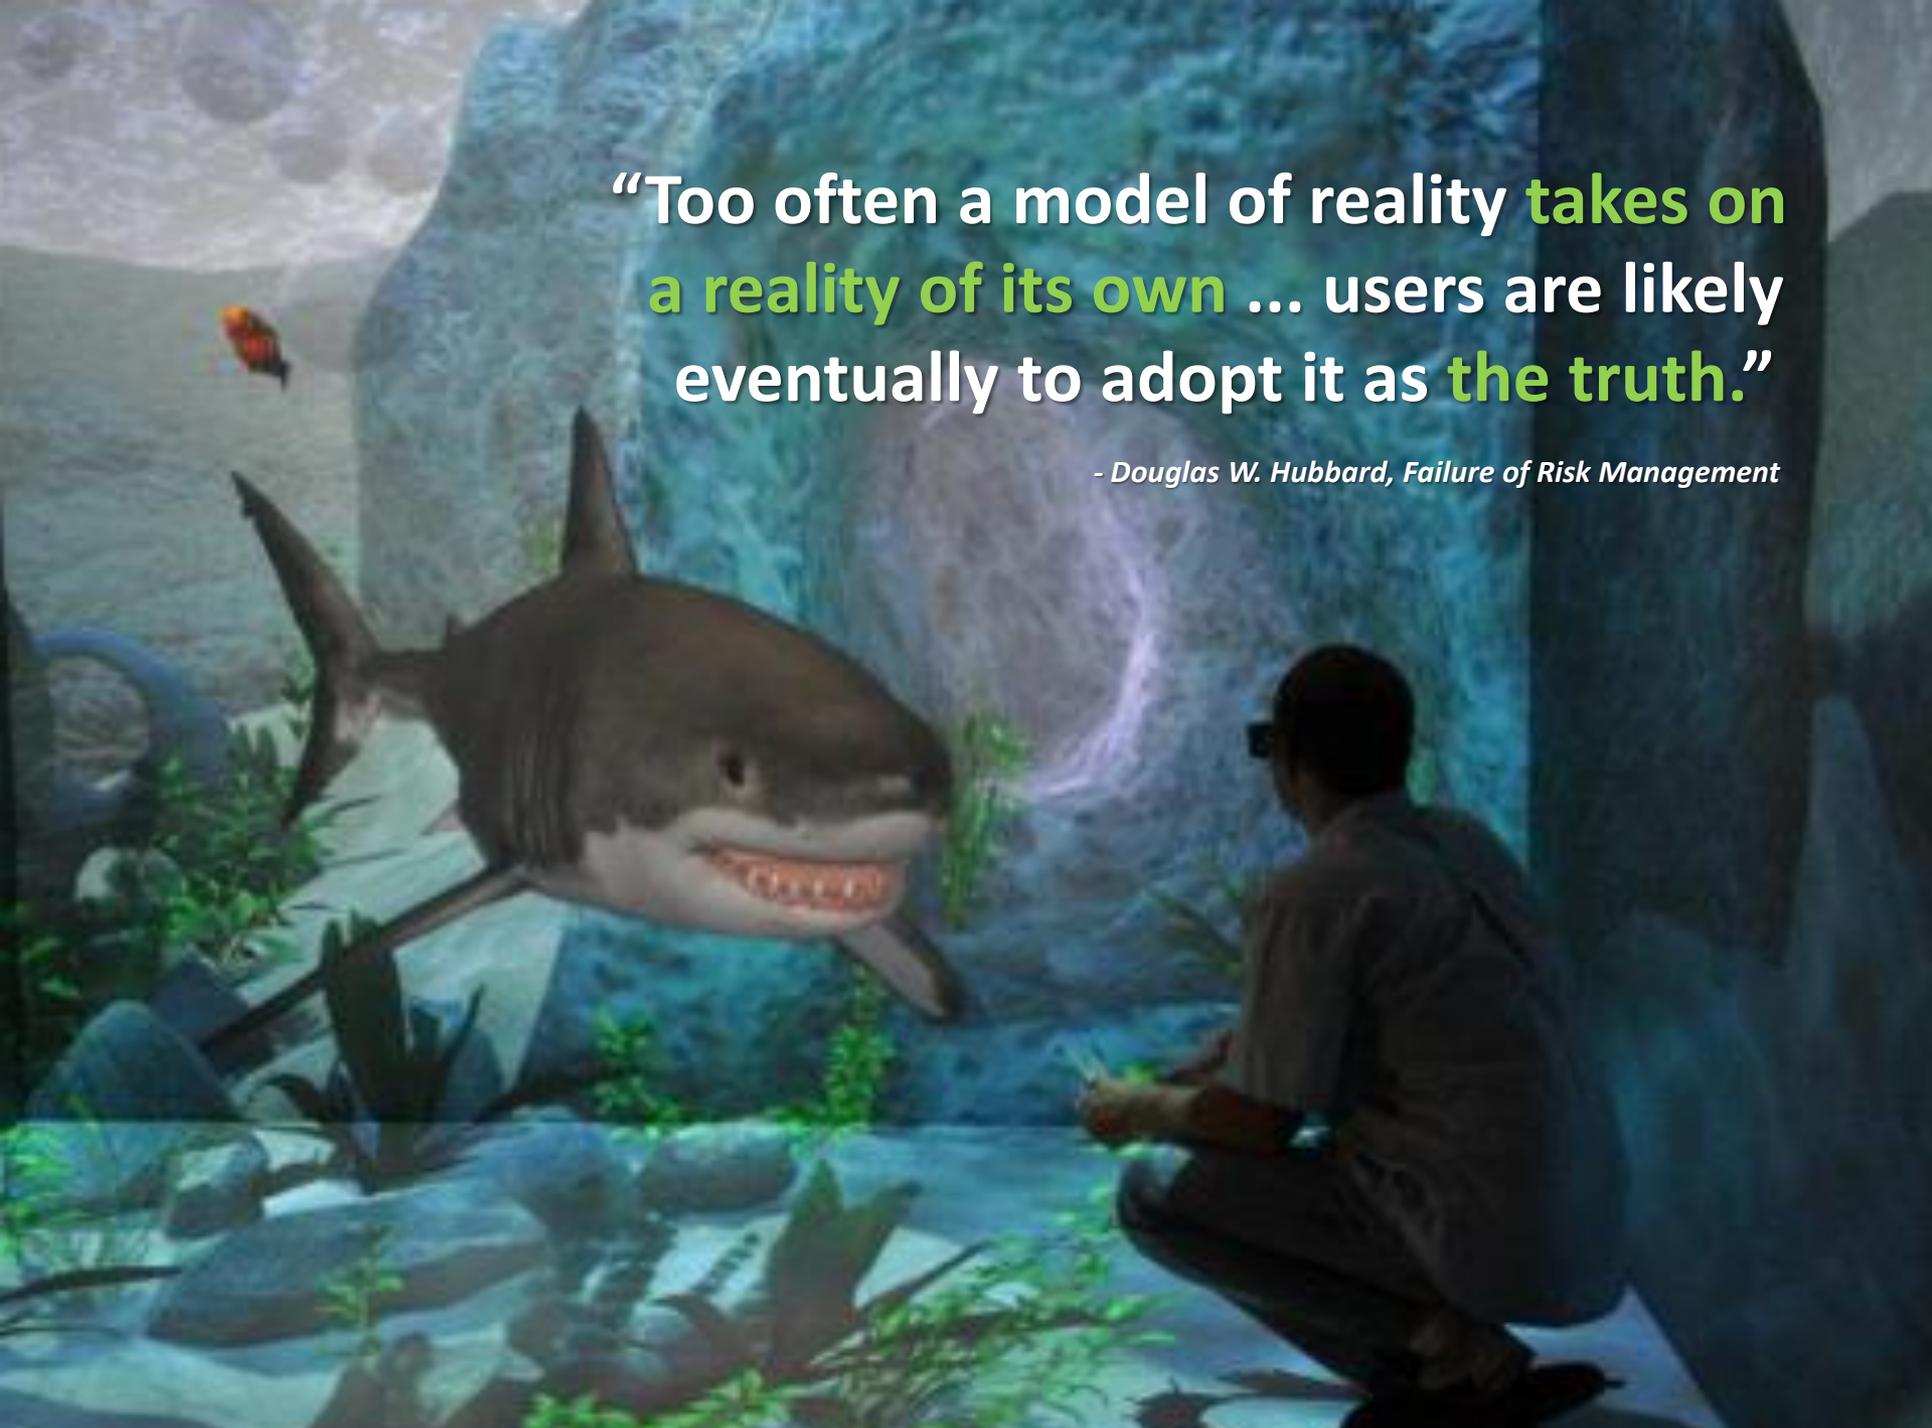

If there is none, its the real thing!

Uncertainty

We simply can't measure or know it all!

A man wearing a VR headset is crouching in a virtual environment, interacting with a large, realistic-looking shark. The scene is set in a virtual aquarium with blue water, rocks, and some green plants. The shark is swimming towards the man, and its mouth is open, showing its teeth. The man is holding a small object in his hands, possibly a virtual fish or a tool. The overall atmosphere is immersive and interactive.

“Too often a model of reality **takes on a reality of its own** ... users are likely eventually to adopt it as **the truth.**”

- Douglas W. Hubbard, *Failure of Risk Management*

Reality Bites!

Inadequate

M&S Quality

can put you at

RISK

Inadequate

M&S Quality

Cost You Money!

Use Risks and Costs due to inadequate M&S Quality

Capital Loss
of Unused M&S

Back to Use of More
Costly Alternatives

Most Extreme Scenario
Loss Lives and Equipment

Good and Defensible M&S Decisions

*“Understanding of the **limitations** in modeling and simulation **quality**, and the **implications** (cost, safety, time, effectiveness) for its users”*

Verification and Validation of M&S defined

Mission Statement

“To demonstrate with *sufficient confidence* that an M&S system is of adequate Quality a.k.a. *fits the intended use* and doesn't pose *unacceptable risks*; to support well-informed *decision* making”

Delivers Right Evidence

Credible

Useful

Accurate

Auditable

Traceable

Verification and Validation of M&S comprises

Detection of defects – classic test engineering

Requirements, specifications, mathematical model, simulation hw/sw and data

Quantification and qualification

Utility level - Functional, operational and user

Fidelity level

Referent data, replicative and predictive

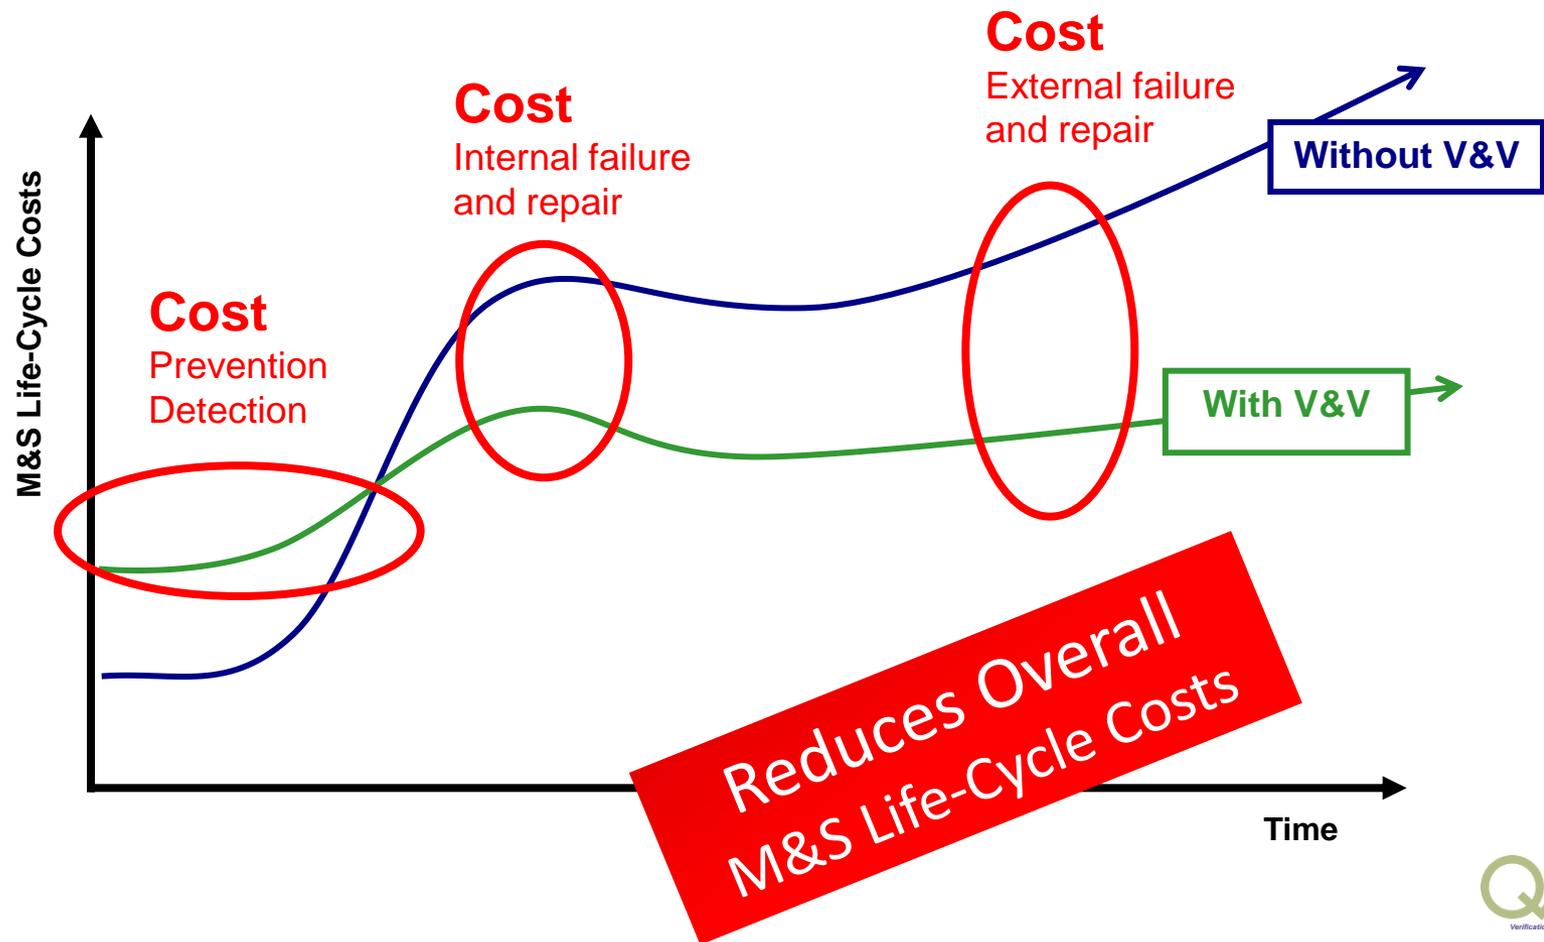

Uncertainty level

Sources, lack of knowledge and randomness

Verification and Validation of M&S

Return on Investment

Verification and Validation

Learns you what you are up to!

Mitigate risks and save on costs

A photograph of a metal spiral structure, possibly a spring or a decorative element, set against a clear blue sky. The spiral is composed of many concentric rings of metal, creating a complex, repeating pattern that draws the eye towards the center. The lighting is bright, highlighting the metallic texture and the geometric precision of the spiral.

Part 2

Overview

Generic Methodology for Verification & Validation

Background

Global Trend

Background

Driving V&V Issues

Different
Processes & Products

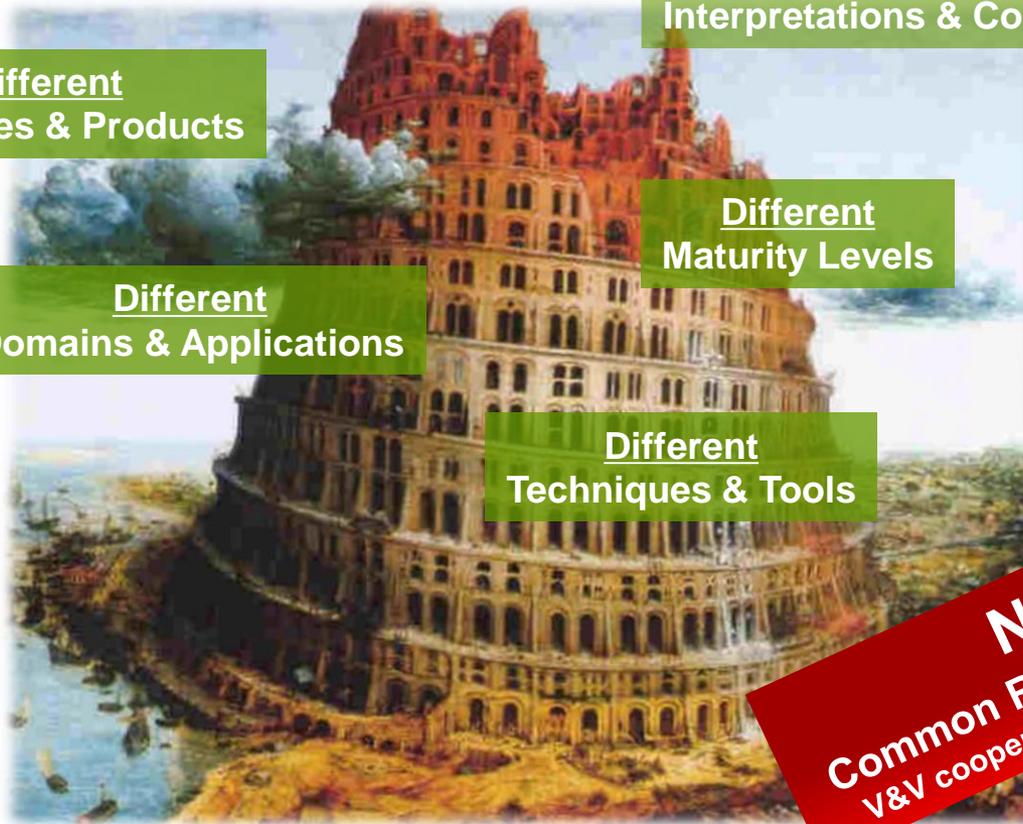

Different
Interpretations & Concepts

Different
Domains & Applications

Different
Maturity Levels

Different
Techniques & Tools

Need
Common Reference & Basis
V&V cooperation & interoperability

GM-VV

Generic Methodology for Verification and Validation

Initiated and Support by 

WEAG REVVA projects as the basis; evolved into NATO-STO MSG-073

Key Objectives

Methodology for V&V that embraces a wide variety of M&S technology and uses

Common basis for V&V cooperation, information sharing and tools

Standardization

Simulation Interoperability
Standards Organization

"Simulation Interoperability & Reuse through Standards"

GM-VV

Generic Methodology for Verification and Validation

Provides

Framework of **Generic** V&V products, processes and organizational components

Application guidance by example, tools and techniques catalog

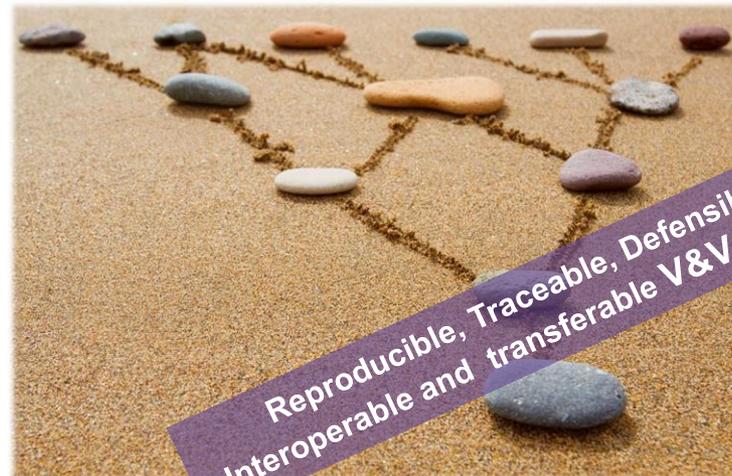

Tailorable

Structured

Risk-driven

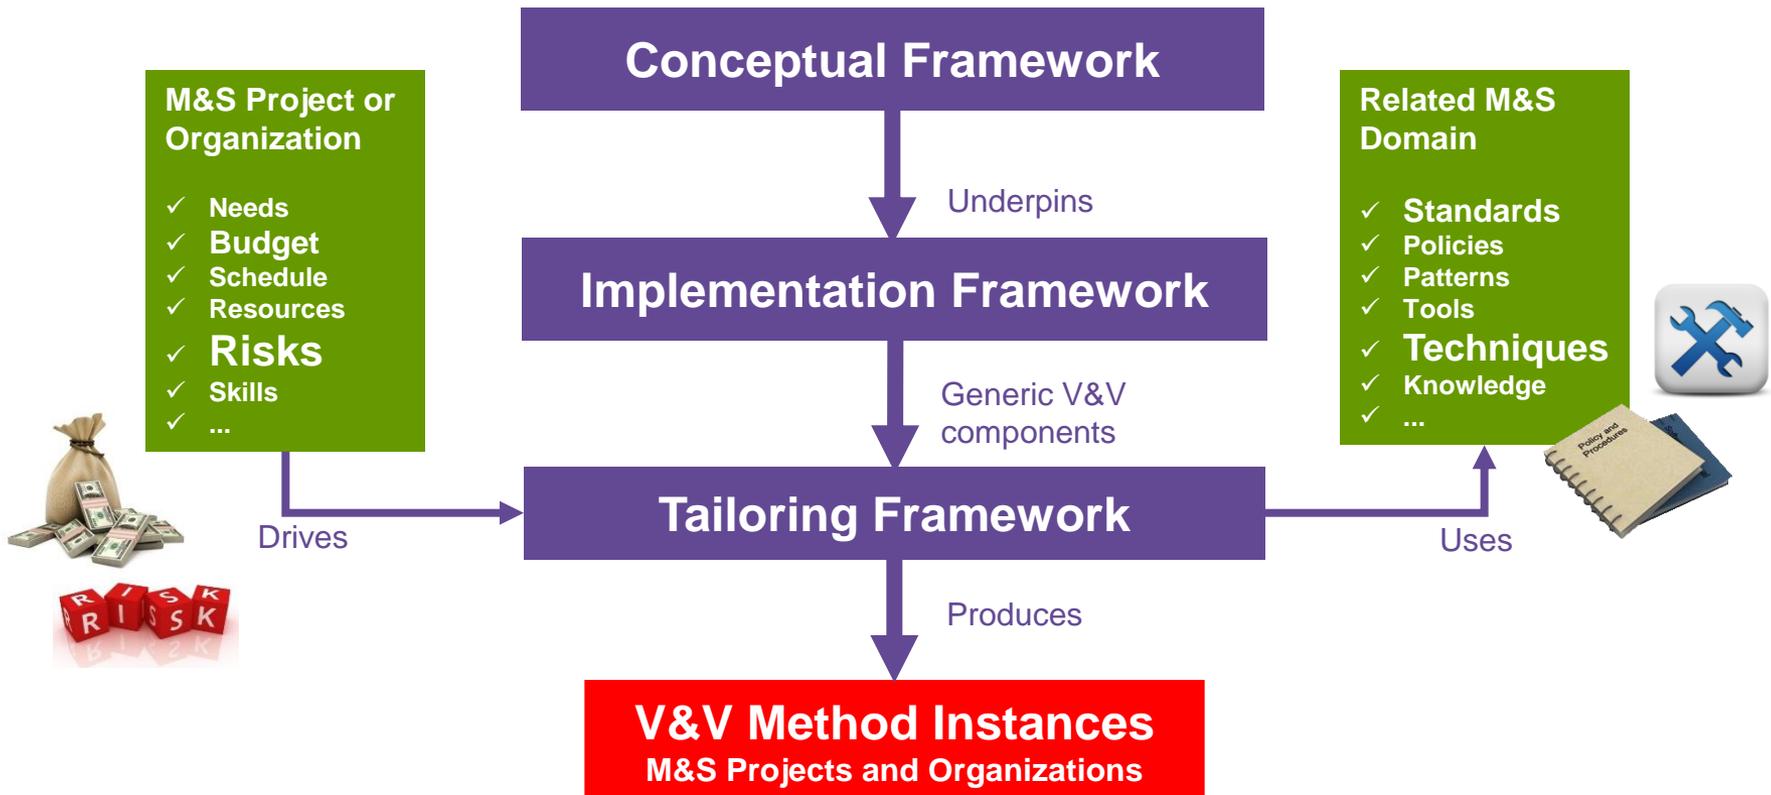

Argumentation

Evidence-based

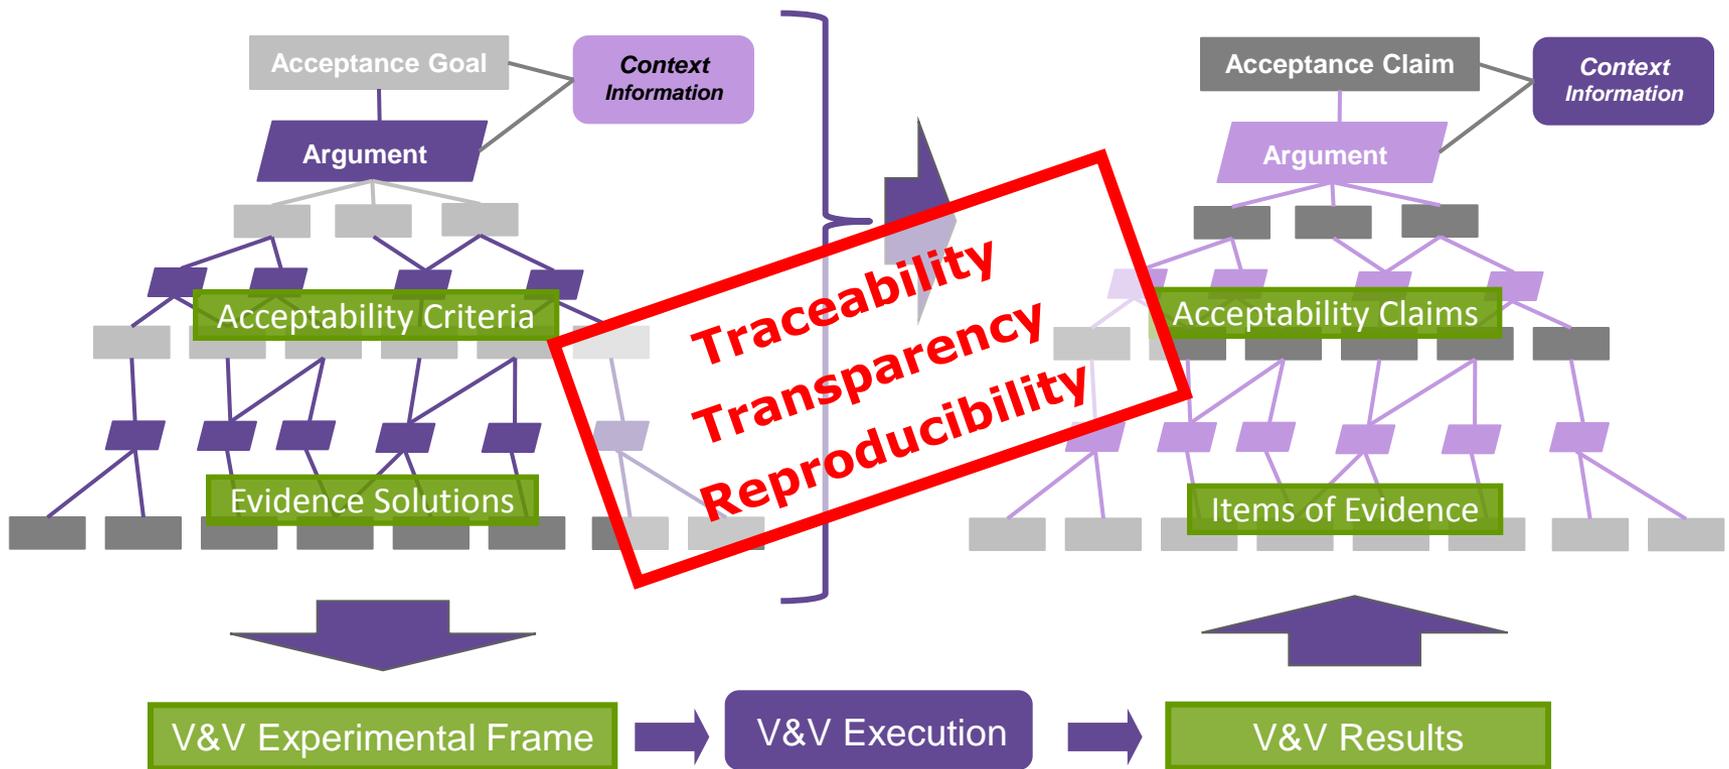

GM-VV

Technical Framework Overview

GM-VV

Argumentation Approach

GM-VV

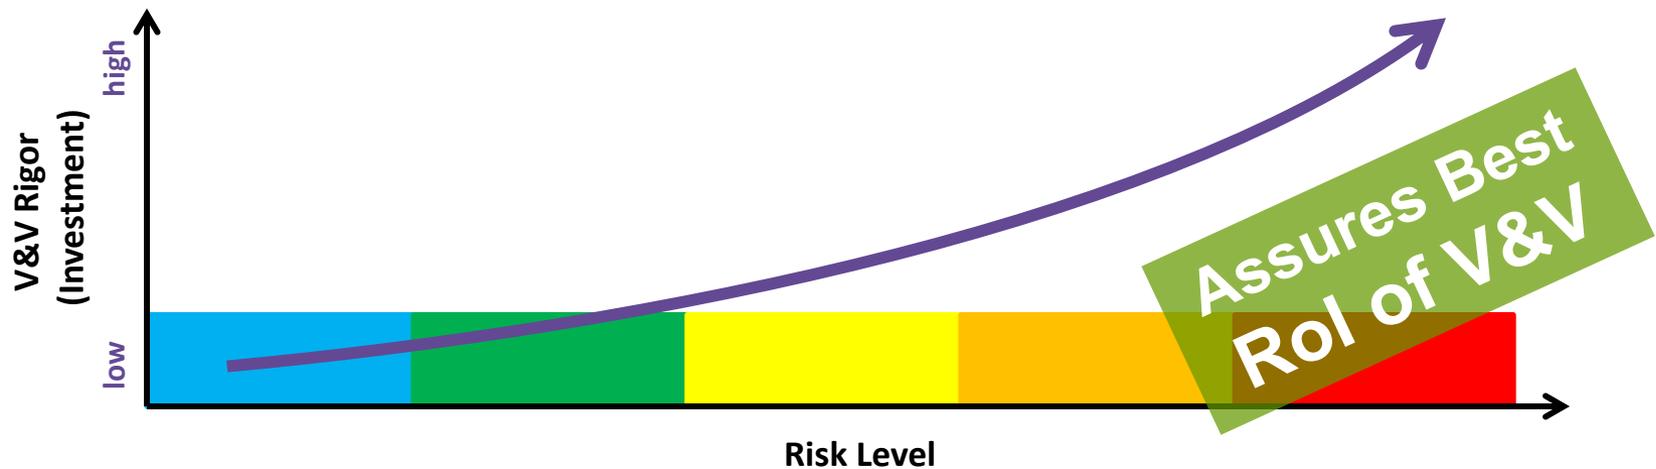

Risk-Based Tailoring and Optimization Approach

Provides a balance between

“Risk level and tolerances”

AND

“Costs and available resources”
